

EPO Elements 11.5 - Release notes

Changes since version 10.5

| Issue Type | Key | Description English |
|------------|---------|--|
| Story | EPO-35 | Webview: SLA timeline added |
| Bug | EPO-52 | EPO Business tree: Fixed a bug that caused long waits when saving changes for a tree |
| Epic | EPO-53 | Veeam Probe: A new probe for monitoring Veeam backups |
| Story | EPO-135 | Webview: The probe status history is now visible in the graph view |
| Bug | EPO-137 | VMWare probe: Fixed a bug where invalid values were returned to EPO. They should now be filtered out. |
| Bug | EPO-154 | Webview can only show data in one way, for example as a absolute number when a percentage is also available |
| Bug | EPO-163 | VMWare probe: Some sensors sometime returned unknown when the value is 0 |
| Bug | EPO-170 | Service probe: When using template the service probe now no longer collects the entire list of services. |
| Bug | EPO-171 | Hardware probe user interface: Improved the interface |
| Bug | EPO-172 | Probe Templates: Improved the way templates are added / fixed some bugs |
| Story | EPO-183 | When registering a (new) EPO license an email address is now required. |
| Bug | EPO-188 | EPO user client: Items in the toolbox were combined case sensitively. |
| Bug | EPO-189 | Moving (by dragging) event log counter nodes resulted in an error |
| Bug | EPO-191 | Webview: The scale of the graph of the SNMP bandwidth node wasn't displayed correctly. |
| Bug | EPO-193 | Backup probe: Backup Exec 14: The job status "Succeeded with errors" translated to the EPO status "Critical". This needs to be "Warning" |
